NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

Import NumPy as np

```
In [1]: import numpy as np
```

Create an array of 10 zeros

```
In [4]: array = np.zeros(10)
array

Out[4]: array([0., 0., 0., 0., 0., 0., 0., 0.])
```

Create an array of 10 ones

```
In [5]: array = np.ones(10)
array

Out[5]: array([1., 1., 1., 1., 1., 1., 1., 1.])
```

Create an array of 10 fives

```
In [0]: array=np.array([5.0]*10)
array
Out[4]: array([ 5.,  5.,  5.,  5.,  5.,  5.,  5.,  5.])
```

Create an array of the integers from 10 to 50

Create an array of all the even integers from 10 to 50

```
In [0]: array = np.arange(10,51,2)
array
Out[6]: array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42,
```

Create a 3x3 matrix with values ranging from 0 to 8

44, 46, 48, 50])

Create a 3x3 identity matrix

Use NumPy to generate a random number between 0 and 1

```
In [0]: array = np.random.rand(1)
array
Out[15]: array([ 0.42829726])
```

Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

```
In [0]: array = np.arange(0.01,1.01,0.01).reshape(10,10)
          arrav
                                                  0.05,
Out[35]: array([[ 0.01,
                           0.02,
                                  0.03,
                                          0.04,
                                                         0.06,
                                                                0.07,
                                                                        0.08,
                                                                                0.09,
                                                                                       0.1
                 [ 0.11,
                           0.12,
                                  0.13,
                                          0.14,
                                                  0.15,
                                                         0.16,
                                                                0.17,
                                                                        0.18,
                                                                                0.19,
                                                                                       0.2
          ],
                                                  0.25,
                 [ 0.21,
                           0.22.
                                  0.23.
                                          0.24.
                                                         0.26.

                                                                                       0.8
          ],
                 [ 0.81.
                           0.82.
                                  0.83.
                                          0.84.
                                                  0.85,
                                                         0.86,
                                                                 0.87.
                                                                        0.88.
                                                                                0.89.
          ],
                 [ 0.91,
                           0.92,
                                  0.93,
                                          0.94,
                                                  0.95,
                                                         0.96,
                                                                0.97, 0.98,
                                                                               0.99,
          11)
```

Create an array of 20 linearly spaced points between 0 and 1:

```
In [0]:
         array = np.linspace(0,1,20)
         array
Out[36]: array([ 0.
                               0.05263158,
                                             0.10526316,
                                                           0.15789474,
                                                                         0.21052632,
                  0.26315789,
                               0.31578947,
                                             0.36842105,
                                                           0.42105263,
                                                                         0.47368421,
                  0.52631579,
                               0.57894737,
                                             0.63157895,
                                                           0.68421053,
                                                                         0.73684211,
                  0.78947368,
                               0.84210526,
                                             0.89473684,
                                                           0.94736842,
                                                                         1.
                                                                                   1)
```

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
 In [0]: mat[2:5,1:5]
Out[40]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
 In [0]: mat[3,4]
Out[41]: 20
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
 In [0]: mat[:3,1:2]
Out[42]: array([[ 2],
                [7],
                [12]])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
 In [0]: mat[4:,:]
Out[46]: array([21, 22, 23, 24, 25])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
 In [0]: mat[3:,:]
Out[49]: array([[16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
```

Now do the following

Get the sum of all the values in mat

```
In [0]: sum_of_mat = np.sum(mat)
sum_of_mat
```

Out[50]: 325

Get the standard deviation of the values in mat

```
In [0]: std_of_mat = np.std(mat)
std_of_mat
```

Out[51]: 7.2111025509279782

Get the sum of all the columns in mat

```
In [0]: sum_of_mat = np.sum(mat,axis=0)
sum_of_mat
```

Out[53]: array([55, 60, 65, 70, 75])
